

sports sub-base

Sports Sub-base is the ultimate drainage layer for all sports applications. available for use in many specialist sports applications as a drainage layer.

Sports Sub-base meets construction, structural and drainage requirements for all sports applications.

applications:

- Drainage and construction platform for sports applications (Polo, Football, Rugby, Hockey, artificial etc.)

material types

Blended Aggregate

national delivery

Specially selected aggregates available nationwide

designed to enhance the end performance requirement

Our materials are sourced and designed to enhance performance

good capillary porosity

Excellent capillary porosity allows gravitational water to drain through easily

low silt content

Our excellent sub layer has a silt content well below the recommended 10%

good air-filled porosity

Air-filled porosity allows oxygen to flow into the soil to maintain a healthy pitch

meeting the requirements of the modern sports surface

Tested and approved by the Sports Turf Research Institute (STRI)
